

Review:

For the angle θ whose terminal side passes through the point $(-4, 3)$, find $\sec \theta$.

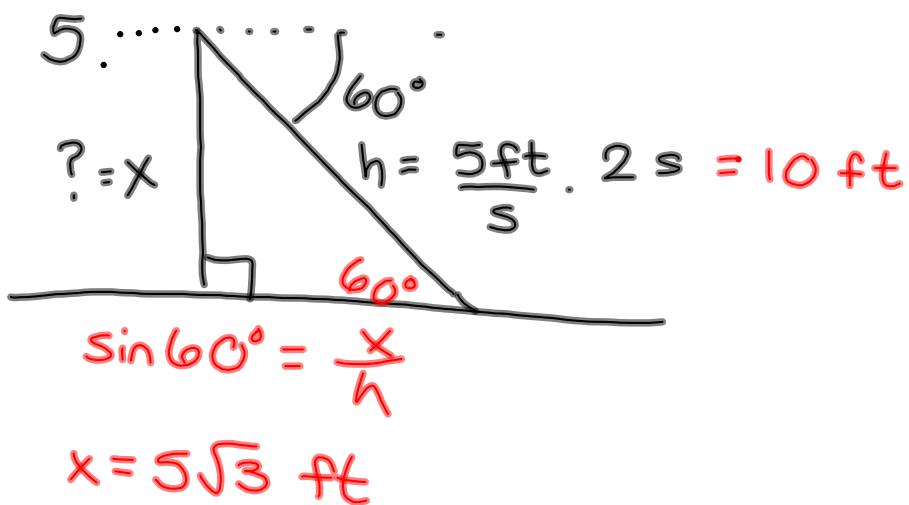

$$-\frac{5}{4}$$

A reference angle is the positive acute angle between terminal side and x -axis

In which quadrant(s) is the cosine function positive?

I & IV

Homework questions?

$$79. \quad s = r\theta, \quad v = \frac{s}{t} \Rightarrow \omega = \frac{\theta}{t}, \quad v = r\omega$$

$$\cancel{\frac{t}{r}} \cdot v = \frac{r\theta}{\cancel{t}} \cdot \cancel{\frac{1}{\cancel{t}}} \quad \theta = \frac{tv}{r}$$

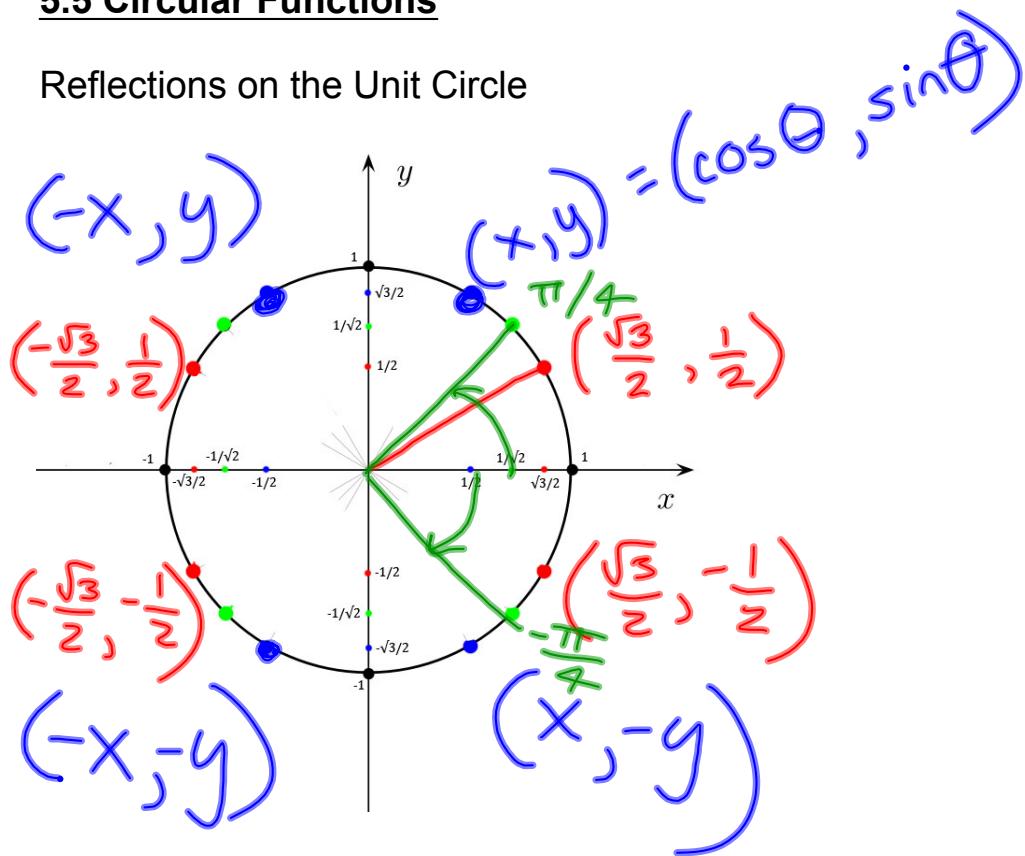

$$r = 39 \text{ in}, \quad \theta = ? \text{ rad}, \quad t = 12 \text{ s}, \quad v = 22 \frac{\text{mi}}{\text{h}}$$

$$\theta = \frac{12 \cancel{s}}{39 \cancel{\text{in}}} \cdot \frac{22 \frac{\text{mi}}{\text{h}}}{\cancel{h}} \cdot \frac{1 \text{ K}}{3600 \cancel{s}} \cdot \frac{12 \frac{\pi}{\text{rad}}}{1 \frac{\text{ft}}{\text{ft}}} \cdot \frac{5280 \frac{\text{ft}}{\text{mi}}}{1 \frac{\text{mi}}{\text{mi}}}$$

$$\approx 119$$

5.5 Circular Functions

Reflections on the Unit Circle

Even/Odd Functions

A function f is even if $f(-x) = f(x)$

even fn's are symmetric w.r.t. the y -axis

A function f is odd if $f(-x) = -f(x)$

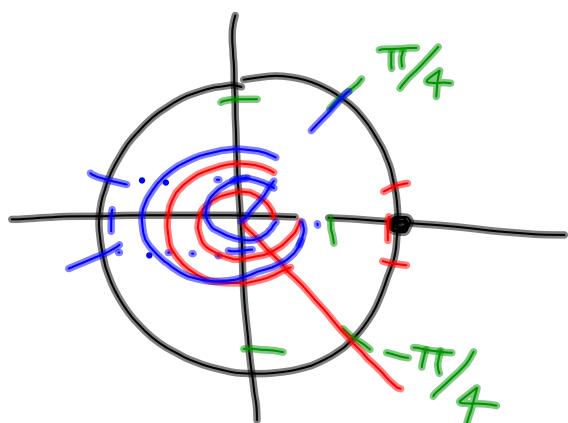

odd fn's are symmetric w.r.t. the origin

Odd-Even Identities

$$\cos(-x) = \cos x, \sin(-x) = -\sin x, \tan(-x) = -\tan x$$

$$\sec(-x) = \sec x, \csc(-x) = -\csc x, \cot(-x) = -\cot x$$

Why is $\cos x$ even / $\sin x$ odd?

$$\frac{-15\pi}{4} \text{ v. } \frac{15\pi}{4}$$

$$\tan(-x) = \frac{\sin(-x)}{\cos(-x)} = \frac{-\sin x}{\cos x} = -\tan x$$

$\Rightarrow \tan x$ is odd

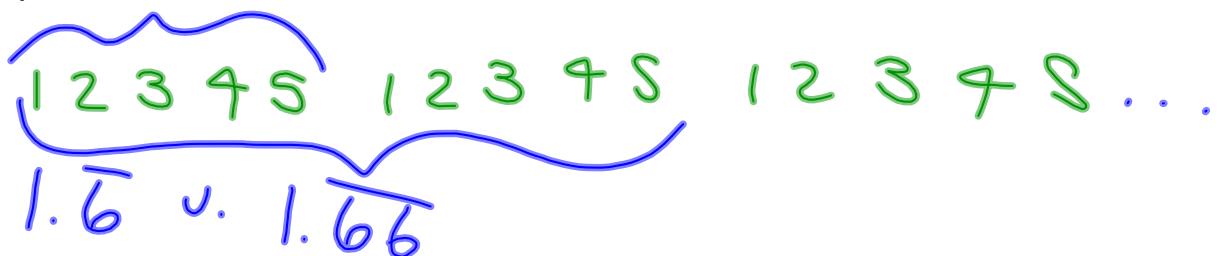

Domain/Range

The **domain** of a function is the set of all input values for which the function is defined (all the x-values that "make sense" when plugged into the function)

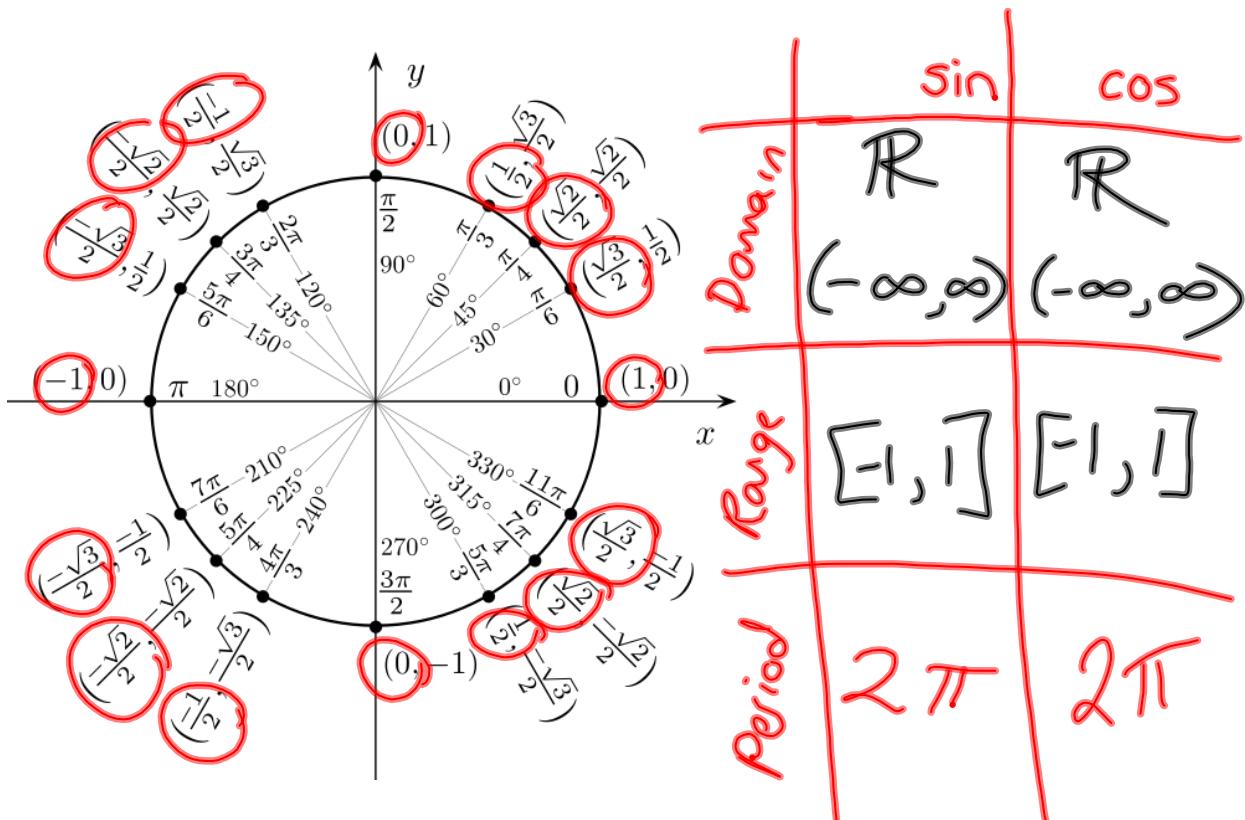

The **range** of a function is the output of the domain (all the y-values that the function takes on)

Periodicity

The **period** of a function is the smallest interval over which the function repeats itself

Determining domain, range and period for the Sine & Cosine functions

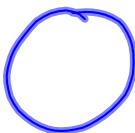

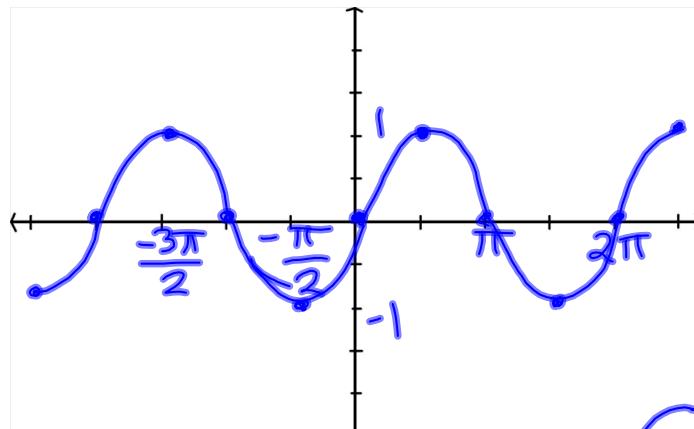

Graphs of the sine and cosine functions

$$y = \sin x$$

domain:
 $(-\infty, \infty)$

range:
 $[-1, 1]$

period:
 2π
 odd

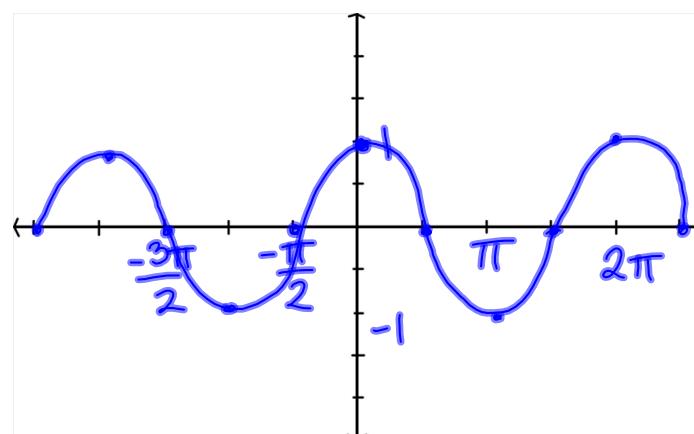

$$y = \cos x$$

domain:
 $(-\infty, \infty)$

range:
 $[-1, 1]$

period :
 2π

even

Domain/Range/Period/Graphs of the other 4 Trig functions?

Function	Domain	Range	Period
$y = \sin x$	$(-\infty, \infty)$	$[-1, 1]$	2π
$y = \cos x$	$(-\infty, \infty)$	$[-1, 1]$	2π
$y = \csc x$	$\{x x \text{ is not an integer multiple of } \pi\}$	$(-\infty, -1] \cup [1, \infty)$	2π
$y = \sec x$	$\left\{x x \text{ is not an odd multiple of } \frac{\pi}{2}\right\}$	$(-\infty, -1] \cup [1, \infty)$	2π
$y = \tan x$	$\left\{x x \text{ is not an odd multiple of } \frac{\pi}{2}\right\}$	$(-\infty, \infty)$	π
$y = \cot x$	$\{x x \text{ is not an integer multiple of } \pi\}$	$(-\infty, \infty)$	π

Why?

$$\sec x = \frac{1}{\cos x}$$

$$\csc x = \frac{1}{\sin x}$$

$$\tan x = \frac{\sin x}{\cos x}$$

$$\cot x = \frac{\cos x}{\sin x}$$
